

OKLAHOMA AQUARIUM

Think Blue to Go Green.

- ❖ Plastics are very dangerous to fish and other aquatic animals including birds and mammals. As many as one-million sea creatures are killed every year by plastic bags and other plastic garbage that gets into waterways.
- ❖ Think your litter or careless liquid disposal doesn't make it to the ocean because Oklahoma is inland? Waste disposed of improperly on dry land can be blown or pushed into a stream or river, which all interconnect and lead to the ocean.
- ❖ Americans use 2.5 million plastic bottles a day! If you only re-use, reduce and recycle on thing, consider making it plastic bottles.
- ❖ A single quart of motor oil can contaminate up to two-million gallons of healthy, fresh water! Dispose of oil properly every time.
- ❖ One leaky faucet can waste 20 gallons of water a day.
- ❖ Washing your car at the car wash instead of your driveway helps keep harmful detergents from running into our waterways untreated.
- ❖ How much can planting one tree help our water resources? A single tree can give off 70 gallons of water per day in evaporation.
- ❖ Did you know the human body is 66% water? And... the human brain is 75% water.
- ❖ Fresh water animals are disappearing 5 times faster than land animals.
